

AutoInstallSSL™

AutoInstall™ 2.0 Introduction

New Features of Version 2.0

AutoInstall SSL™ 2.0 Introduction

AutoInstall SSL™ 2.0 is our revolutionary technology solution that simplifies the entire SSL certificate enrollment and installation procedures needed to successfully secure a website. It works with various SSL certificate brands/types and incorporates their specific life cycle processes while seamlessly working within a specific web hosting control panel/platform.

It follows the many different SSL certificate standard processes & guidelines; such as, enrollment, (i.e. CSR generation), validation, installation, reissue, etc. automatically with minimal or no human intervention.

Our primary goal is to tremendously simplify the UX and process to successfully get SSL certificates issued and installed in the fastest and easiest way possible. Of course, the high-assurance certificates (Organizational Validated (OV) & Extended Validated (EV)) will still need manual intervention per the CA/B Forum requirements, but our aim is to make that as smooth as possible. The collective efforts of this plugin is to reduce the amount of technical support, customer service and management required to support the sale of SSL certificates for our partners, resellers, web hosting companies and IT professionals in order to profit more from SSL and truly make SSL a worthwhile profit center within a qualified business.

New Features in AutoInstall SSL™ 2.0 vs. v0.9x BETA

With our initial BETA version release, we gathered a lot of great feedback and learned a lot. The BETA “test” and the knowledge gained helped pave the way to the significant improvements made to our latest release. The new 2.0 version has been re-coded from the ground up. It is much more robust and has several new features & benefits that were a MUST! Check them out below.

- Complete overhaul of the User Interface (UI).
- Much improved User Experience (UX).
- Smoother enrollment process.
- Validation of the certificate is done in a more transparent way.
- Installation process was improved.
- Specific certificate management controls.
- Now supports the re-issue of certificates.

- Now supports SAN certificates, as well as installing and supporting certificates on different domains within the same control panel instance.
- Now will work for large hosting providers.
- Now supports Wildcard certificates, which includes a single step installation for the multiple domains.
- Now supports manual installation capabilities, if you decide not to process through the AutoInstall SSL™ technology.
- Retrieve a back-up of the private keys which may be needed for certain compliance regulations.
- Extensive QA with all of our supported products.
- Robust Error Logging function for delayed CA response times.
- Much more user-friendly Error Code explanations.

AutoInstall SSL™ 2.0 Supported Platforms:

New version is slated to support the following platforms:

- cPanel (centOS, RedHat and cloud Linux) AVAILABLE NOW!
- Plesk (centOS, Ubuntu and Windows) AVAILABLE NOW!
- Windows (v2.0 coming soon)
- Command Line interface (v2.0 coming soon)
- Robust support & integration with a new WHMCS plugin (coming soon)
- Available now in The SSL Store™ REST API for custom integration
- Available now in The SSL Store™ White Branded store fronts
- Token available now in all websites of The SSL Store™

Comprehensive instructions are available within the Launch Kit download of the plugin itself.

AutoInstall SSL™ for Channel Partners

With AutoInstall SSL™ 2.0, our resellers have a lot of flexibility to tweak/customize their offerings to their end customers.

Resellers now can chose from the following options:

- Integrate with our current WHMCS plugin to give Token to their customers.

- Do a custom integration via our REST API and offer Token in their own control panel however they see fit.
- Use our white branded storefront solution, which comes with AutoInstall SSL™ support for every order.
- COMING SOON! Use a Command Line interface to integrate with your own provisioning. For example, you are offering a Wordpress site with your features; you will be able to provide SSL certificates as a part of the build script for those hosting scenarios.
- Increased flexibility to use our dashboard and/or plugin and interchange freely. For example, you get your certificate via AutoInstall SSL™ now you want to control the enrollment process, then you can go back to dashboard and re-issue the same certificate if necessary.
