

AutoInstall SSL™

cPanel Installation Guide

AutoInstall SSL™ 2.0 Installation for cPanel

1. Download the plugin from <https://www.thesslstore.com/autoinstall-download>
2. Copy the autoinstallssl folder from the zip file to your WHM/cPanel server, it requires no specific location.
3. As the root user, run the install command at the prompt:
 - `cd autoinstallssl`
 - `chmod 777 install`
 - `./install`
4. How to Uninstall AutoinstallSSL from your cPanel. Please go to directory where you have extracted zip file.
 - `cd autoinstallssl`
 - `chmod 777 uninstall`
 - `./uninstall`
5. Activate ionCube loaders from WHM panel.
 - Go to “Tweak Settings “ menu under “Server Configuration “
 - Click on PHP tab.
 - Check the ionCube option and click on save.

The screenshot shows the WHM interface with the 'Tweak Settings' page open. The 'PHP' tab is selected and highlighted with a green box. In the 'cPanel PHP loader' section, the 'ioncube' checkbox is checked and highlighted with a green box. Other settings visible include 'cPanel PHP max execution time' (90 s default), 'cPanel PHP max POST size' (55 MB default), and 'cPanel PHP max upload size' (50 MB default). The left sidebar shows the 'Tweak Settings' menu item highlighted. The top of the page shows system information: 'CENTOS 6.6 x86_64 xenlvm - cpanel | WHM 11.46.1 (build 2) | Load Averages: 0.04 0.07 0.01 | Secure Connection'.

All | cPanel Addons Site Software | Compression | Display | Domains | Logging | Mail | Notifications | PHP | Redis | Find

cPanel PHP max execution time (Minimum: 90) ☒ 90 s default ☐ 90 s

cPanel PHP max POST size (Minimum: 55; Maximum: 2,047) ☒ 55 MB default ☐ 55 MB

cPanel PHP max upload size (Minimum: 50; Maximum: 2,047) ☒ 50 MB default ☐ 50 MB

cPanel PHP loader ☒ ioncube ☐ sourceguardian ☐ zend

Notes:

- The first time you enable a log statistics program, it will take between 24 and 48 hours for the reports to appear in a users' cPanel interface. If the server is under load, it can take longer than 48 hours for the report to appear.
- Disabling cPanel features requires a theme which supports dynamic features.

6. Here's another way to install ionCube Loaders in cPanel using a command prompt.

- To install ionCube, first connect to your server using root access using ssh client (e.g. Putty) and execute following command:

```
# /scripts/phpextensionmgr install IonCubeLoader
```
